Sierpinski problems

Definition

For the original Sierpinski problem, it is finding and proving the smallest k such that $k \times b^n + 1$ is not prime for all integers $n \ge 1$ and GCD(k+1, b-1)=1.

Extended definition

Finding and proving the smallest k such that $(k \times b^n + 1)/GCD(k+1, b-1)$ is not prime for all integers $n \ge 1$.

Notes

All n must be >= 1.

k-values that make a full covering set with all or partial algebraic factors are excluded from the conjectures.

k-values that are a multiple of base (b) and where (k+1)/gcd(k+1,b-1) is not prime are included in the conjectures but excluded from testing.

Such k-values will have the same prime as k / b.

Table

l ' '	verin k's that make a full covering set with all or partial algebraic factors	Remaining <i>k</i> to find prime (<i>n</i> testing limit)	Top 10 k's with largest first primes: k(n) (sorted by n only)	Comment s
